Notes with Strategy to Support the Change Process Administration Quote

The technology supporting the Immaculate Conception School includes a robust suite of network systems, computer hardware, and software. The Technology Director and school administration develop the Technology Plan and deploy the resources accordingly. SEE Needs Assessment for more details.

If a need develops that can be addressed without reworking the technology plan and the budget is available, those needs may be addressed within the school year. Prior to identifying the appropriate solution, other requests may require a review by the Technology Director and school administration. That may be followed by further investigation within the faculty and with outside vendors.

Focus for the future —

"Challenge ourselves to look past what we are currently doing and look for the best parts of what is available and use them to support student learning in the 21st century"

↳ How do we inspire ours to buy-in?

✳ This needs to be the focus of PD! & strategy!
